

For Immediate Release:

IMS Engineered Products Introduces Titan Line of Computer Server and Networking Racks
New line addresses power, cabling and cooling management through highly configurable product line

Des Plaines, IL (January 7, 2010) – IMS Engineered Products today introduced its Titan line of computer server and networking racks. The racks within the Titan line are highly flexible, extremely configurable and were specifically designed to address the power, cabling and cooling management challenges facing computer and network rack installations. The Titan line reduces the total cost of ownership through racks designed to lower thermal management costs for single and multi-bay consoles. In addition, the Titan product line offers the highest static and dynamic load ratings of any rack line on the market.

Power management

The Titan line features an array of power strips for single and three phase applications in 15, 20 and 30 amp models. Power strips are designed with 0 RU mounting to the vertical power panel saving valuable rack mount space. Power strips are available with optional power and environmental monitoring capabilities.

Cabling

The Titan line addresses cabling management through its vertical cable manager feature including 1RU and 2RU HD metal fingers to manage large cable bundle drops and routing.

Cooling management

The Titan line is designed to incorporate an optional overhead duct system option which exhausts heat reducing thermal loads inherent in today's data installations. Network cooling is provided through the Titan's switch cooling solution which converts the unit from a side to side heat exhaust configuration to achieve front to rear heat exhaust.

The Titan line can be configured in five RU heights (51RU, 47RU, 42 RU and 24RU), three frame depths (36", 42" and 45") and two frame widths (24" and 29"). Racks can be configured on-line with the IMS product configurator. For more information, visit www.imsep.com.

About IMS Engineered Products

IMS Engineered Products, a division of IMS Companies, LLC, is a manufacturer of a full line of proprietary and custom enclosures and video mounting products for electronic packaging, data and audio visual applications under its IMS Engineered Products and Installer's Choice brands. For more information, visit www.imsep.com and www.installerschoice.com.

About IMS Companies, LLC

IMS Companies, LLC is a diversified group of companies positioned with the size, scale and reach necessary to provide innovative solutions for its customers through custom manufacturing and development of proprietary products. IMS serves a wide array of industries including the appliance, automotive, commercial vehicle, communications, consumer, electronics, medical and various industrial markets.
